<p>Pre-cooling Test: This test shall be conducted to record the time taken for cooling the coach without passenger, with fresh air filters closed, lights switched „ON“ and after raising the inside temperature of air-conditioned compartment to 45°C.</p>
<ul style="list-style-type: none"> • Place the coach inside the shed. • Close all fresh air intake openings. • Record dry and wet bulbs temperature of ambient air. • Provide the electrical compensating load, as calculated, inside the coach. This load should be kept in OFF condition till further instruction. • Raise the inside temperature of the coach to 45°C by switching „ON“ heater circuit in test mode. • Switch „ON“ all lights. Set the temperature setting at position no. 6th (i.e., 24.04°C) of both sides and run both the AC package units in auto mode keeping compensating load „OFF“. • Record the timings for „cut off“ of both the plants and other parameters during the test as per check sheet • Total time taken by each plant to cool the coach should not exceed one hour.

- Feeder testing on 750 volts.
- Testing of local mains supply system.
- Measurement of currents for AC plant.

- Adjust all fresh air openings as per the requirement of the coach.
- Switch „ON“ the electrical compensating load.
- Raise the compartment temperature to 45 °C by switching „ON“ heater circuit in test mode.
- Set the thermostat setting on both AC control panel at position 6 (i.e., 24.04°C). Switch „ON“ all lights and fans.
- Run both AC package units as soon as compartment temperature is raised to 45 °C and record the time.
